Hi, I'm Julian Lo

I design, develop, maintain and test apps

My GitHub   My Facebook   My LinkedIn   My Yelp   Email Me   c. 425-894-1133

Objective

I'm a UI developer — at Microsoft for 8 years — transitioning into mobile, full-stack, and open-sourced development. My strongest interest lies in building beautiful and delightful user experiences on mobile devices. My current focus has been on Android app development, and have been learning iOS development as well.

Skill Set

Android/Android Studio, Java, Node.js/Express, Mongo, Amazon EC2 (1 year)
iOS, Electron, React Native, Firebase (Learning + strong interest, <1 year)
C++, C++/CX, COM, Win32 (7 years)
C#/.NET, XAML, Windows Runtime (2 years)

Employment History

Senior Android Engineer (Contract) | Avanti Markets app
BYNDL | 2016
Worked 3 month contract to implement version 2 of the Avanti Markets app.
- Implemented complete UX redesign and released to Google Play Store.
- Implemented layout optimizations for phone and tablet form factors.
- Designed and implemented tool to allow the app to be re-themed with new colour scheme and app logos.
- Tech: Android, Java, Electron, JavaScript

Senior Software Engineer | Windows Spotlight (Windows 10)
Microsoft | 2013 - 2015
- Ideated, prototyped, and implemented UX for Windows Spotlight.
- Implemented XAML custom controls ("hotspot controls") used to subtly reveal information to the user and also collect feedback from the user.
- Mentored/led two junior developers also working on the feature.
- Tech: C++/CX, XAML, COM, Windows Runtime

Software Engineer II | Out Of Box Experience (Windows 8)
Microsoft | 2010 - 2012
The "Out Of Box Experience" is the Windows component responsible for executing final per-machine setup/ provisioning tasks that must occur after the OS is installed but before the user starts using the machine.
- Worked on a plugin-based task execution engine for completing critical machine provisioning tasks.
- Wrote modern Windows 8-style wizard and wizard pages.
- Tech: C++, COM, Windows Runtime

Software Engineer | HomeGroup UX (Windows 7)
Microsoft | 2007 - 2010

HomeGroup was a feature introduced in Windows 7 allowing users on a single subnet (i.e. a home) to easily share files with each other.

- Wrote wizard and control panel pages to allow users to configure their HomeGroup and network settings.
- (Tech: C++, COM, Win32)

Side Projects

Pics for reddit - Android app
2016

The app is a Reddit client, specifically for viewing image posts from Reddit.

- Key features include proper user token management, infinite scrolling lists, pleasant animations and transitions.
- Relevant links: Google Play Store, GitHub

Bathroom Maps - Android app, Node.js server
2015 - 2016

This app that helps locate public bathrooms, and allows users to suggest new bathrooms and write reviews for existing ones. (Tech: Android/Java, Node.js/Express, Mongo)

- Implemented a REST API built on Node.js to retrieve, review, and manage the list of bathrooms.
- Used Mongo DB and geospatial indexing for fast retrieval of bathrooms by geolocation.
- Built an Android app to view and review the bathrooms, caching data appropriately and allowing bathrooms to be filtered by category and rating.
- GitHub links: Android, Server. (Google Play Store release pending)

Picture Bible - Android app
2015

My first crack at an Android app. Picture Bible is a fun bible app that displays photos of architecture, food, nature, and animals behind each chapter. (Links: Google Play Store, GitHub)

Education

University of Waterloo - Bachelor of Mathematics
2002 - 2007

- Majored in Computer Science, minored in Pure Mathematics
- Cumulative GPA of 85%
